Royal Text Editing Typewriters

Royal SE-6000B

Royal SE-6000D with display

Two Royal alternatives to solve your daily typing problems.

With the SE-6000B and SE-6000D, Royal gives you a choice between two state-of-the-art electronic text editing typewriters. They are virtually identical in all respects, except one. The SE-6000D has the added capability of a brightly illuminated 40-character "window into memory" display.

Both models perform instant error correction, simple and rapid text editing, speedy text printout, statistical/columnar typing, and automatically print as many personalized copies as you need. Typists will be especially pleased because they are relieved of the tedious and time-consuming job of retyping documents that are revised over and over again. And errors noticed while typing are simple to correct because they can be lifted off the paper instantly and corrected in the memory simultaneously, at the touch of the special correction key. Similarly, during proofreading, it's completely effortless to correct errors with the aid of the easy-to-use search word and locator keys. They scan the memory, automatically stopping at the area programmed for change. Then you simply insert or delete words and text. The result: daily typing productivity is dramatically speeded up and the typing cost per letter or document is substantially reduced.

SE-6000B or SE-6000D?

Whichever you select, you're assured a positive solution to the day by day typing needs of any office, regardless of its size. In fact, the SE-6000B and SE-6000D are so advanced, they actually make everyday typing simpler and faster. And because they can increase typing productivity by as much as thirty percent, they practically pay for themselves in the first year. By considering your requirements and budget, you can easily decide whether it's the basic SE-6000B or the SE-6000D with display, that satisfies your applications. Should you opt for the more modestly priced SE-6000B, there's no fear of obsolescence since Royal can convert it to the display capability of the SE-6000D, whenever you're ready. And all you pay is the difference in the original price between the two models. The choice is yours.

Memory plus mini-diskettes

Not only does the built-in memory in both models store up to two pages of typing, the mini-diskette system permits the storage of up to 32 additional pages on each individual mini-diskette. You can have a convenient and complete library of documents at your fingertips.

High speed printing and error correction

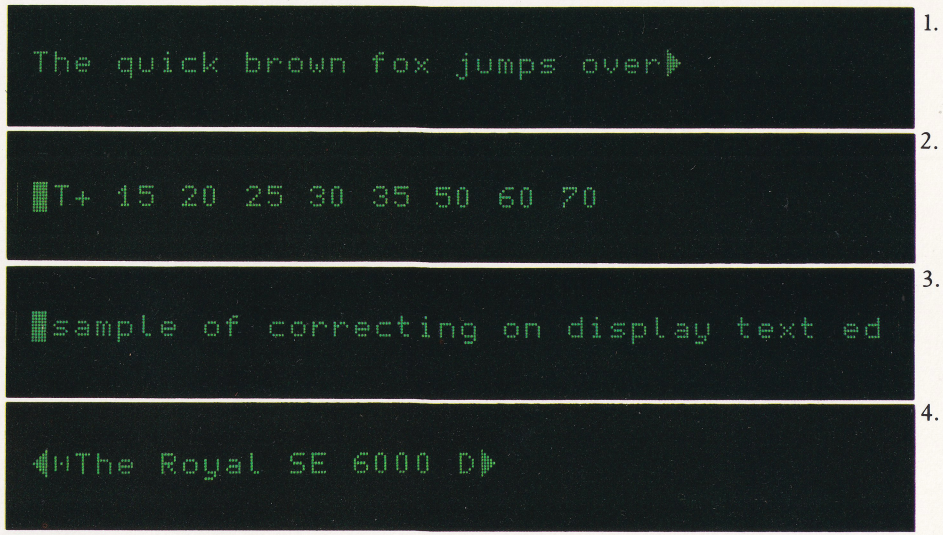
Letters and documents stored in the working memory, or on a mini-diskette, can be automatically printed at a rapid 240 words per minute. Errors are easier than ever to correct. Because at the touch of the high speed correction key, the typing element backs up, lifts the error cleanly off the paper and immediately returns to typing position to substitute the correct character. The error is also corrected in the memory at the same time.

Fast and easy text editing

No matter what revisions you make to stored text — a complete change of format, pitch, or type style, inserting a new paragraph, deleting or changing a word, etc. — they can be made simply and rapidly, because only the revisions need be typed. This is made possible by the use of the search word and/or locator keys which pinpoint a character, word, line, paragraph or page. It's a dramatic time-saver.

Automatic text repetition

Typing can be boring and time-consuming. Especially when there's a pile of personalized form letters, contracts, specifications, or estimates. By simply storing this information on one or a series of mini-diskettes, it can be recalled, edited and automatically printed. And each customized copy, no matter how many, is letter-perfect. Typists will love it.



4 ways the SE-6000D's "window into memory" helps you edit and correct errors faster before printing.

Typing productivity is increased since you can get final copy from the first draft. And because the typist can preview errors on the display, you'll never see them at all.

1. Brilliantly lighted eye-ease green characters let you instantly read 40 letters, numbers and signs. Review stored information word by word at normal reading speed, or fast scan line by line, to locate a particular word, sentence or paragraph.
2. Easy visibility makes it simple and rapid to change or double check all programmed tab stops, margins and unused mini-diskette tracks.
3. It's as easy to revise and edit on the display as it is to proofread a typewritten page. You see 30 characters before and 10 characters after the point you're searching for. In seconds, you can insert, delete, adjust and justify any stored information.
4. Preview before printing: headings to be centered, columns of decimal figures, the search word, plus graphic representations of function codes.

Advanced electronic keyboard

With the SE-6000B and SE-6000D, Royal has virtually eliminated the use of conventional knobs, dials and levers. All operations are swiftly and easily performed directly from the keyboard. An extraordinary array of convenience keys control an unbelievable number of time-consuming operations.

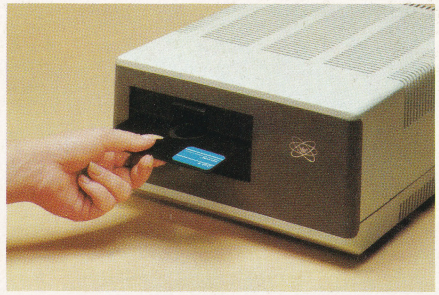
- Automatic paper injection/ejection
- Automatic carrier return
- Automatic centering on a line or between tab positions
- Automatic underscoring of individual words or groups of words
- Automatic decimal alignment
- Full proportional spacing in three sizes
- Perfect right margin justification
- Simplified merging of names and addresses with form letters
- Automatic switching from 10 to 12 pitch without changing element; instant changing to 15 pitch
- 60 pitch offers graduated spacing for printing graphic effects
- Shadow printing for highlighting words and headings
- Up/down indexing for sub and super scripts (H_2O, 10^x)
- Automatic two-column printing
- Automatic tabulation memory
- Automatic selection of line spacing
- Automatic recording of margin and tab settings
- Automatic linking of up to 16 tracks

Other convenient features

- 47 contoured keys; extra key available
- All typing keys have repeat action capability
- Optional adjustable pin feed device for handling continuous forms with end-of-paper shutdown
- Carbon ribbon cartridge
- Lift-off correction ribbon
- Built-in self-diagnostic system and modular design allow for prompt and easy servicing. Minimizes downtime.
- Indicator for remaining character capacity in working memory
- Automatic table of contents for mini-diskettes; automatic linking of text
- Automatic pagination and repagination
- Elimination of widow and orphan lines
- Global search capability
- Automatic text condensation
- Unique three-character "action display"

Specifications

Dimensions (Typewriter): 21½"(W) x 19½"(D) x 9"(H). 55 lbs.
Mini-Diskette Station: 10¾"(W) x 14⅜"(D) x 6⅜"(H). 14¼ lbs.



Specially designed optional work table has convenient shelf space and storage area for disk drive.
